

Diacetate

Applications:

Diacetate is a colorless, low odor, very slow-evaporating solvent that gives good flow-out to baking lacquers and enamels. Its major uses are in thermoplastic acrylic coatings as a reflow solvent and in foundry core-binding applications. Also, it is used in the manufacture of perfumes, printing ink, lacquers and resins. It can be used as an alternative to Butyl Glycol and Butyl Glycol Acetate in many usages.
